PROFESSIONAL SUMMARY

Full-Stack Developer who has shipped a production platform for a real estate agency, built and secured a vehicle-registry system as a solo graduation project — discovering and fixing a critical authentication vulnerability before launch, verified with 11 security tests — and contributed the majority of a unified EHR system spanning 9 database tables and 18 protected API routes. IT graduate (July 2026), currently working as a Frontend Developer at Vica Solution.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3

Styling: Tailwind CSS, Framer Motion

Backend: Next.js API Routes, REST APIs, Laravel

Database: PostgreSQL, Prisma ORM, MongoDB

Tools: Git, GitHub, Vite, Axios, Vercel

WORK EXPERIENCE

Frontend Developer — Vica Solution

Sep 2025 – Present

- Developed and maintained reusable React + TypeScript components across the admin dashboard, improving UI consistency and reducing code duplication.
- Integrated REST APIs using Axios to handle dynamic data, CRUD operations, and role-based routing across multiple dashboard modules.
- Built responsive layouts with Tailwind CSS and Vite, improving page structure, load performance, and usability across devices.
- Collaborated with the backend team to debug API contracts, resolve CORS issues, and align data structures between frontend and backend.
- Since April 2026, also supervise and mentor a group of frontend trainees — reviewing and fixing their tasks and recommending best practices for clean, maintainable code.

PROJECTS

Vehicle Management Platform — Next.js · TypeScript · Prisma · PostgreSQL

Full-Stack Developer — Graduation Project

- Built a full-stack vehicle registry platform — 7 database tables, 31 API endpoints, and 26 admin/public views — linking vehicles to their legal and administrative records, with public license-plate search and a theft-report submission flow.
- Discovered a critical authentication gap in the admin panel before launch (no session verification, unprotected delete routes) and rebuilt the auth layer from scratch — JWT sessions, httpOnly cookies, centralized route protection — verified with 11 custom security tests.

Syrian Real Estate Platform — React · TypeScript · Node.js · MongoDB

Full-Stack Developer — Team Project, Real Client

- Built a bilingual (Arabic/English, RTL-supported) real estate platform — 8 pages, 51 components, and 15 API endpoints — currently showcasing 33 properties and 82 images across 3 governorates.
- Built an admin dashboard for property management and image uploads; optimized images for a 94% size reduction, bringing first-load weight down to 230 KB.

MediLink — Next.js · TypeScript · Prisma · PostgreSQL

Full-Stack Developer — Collaborative Project

- Built a unified EHR system — 9 database tables and 18 protected API routes across 5 role-based portals — connecting patient records across doctors, pharmacies, and hospitals.
- Implemented a clinical decision engine covering 18 drug-interaction/allergy rules, tested against 100 sample patients and 167 prescriptions.
- Designed an immutable audit log and two-layer authorization system to protect sensitive medical data.
